

The Successful Mac Admin — Field Guide

Keep this. It's everything from the workshop on one page — built on the 4 C's.

Curiosity

Stay a learner.

- Keep a home lab — a spare Mac or VM to break safely.
- Skim Apple release notes + the MacAdmins newsletter weekly.

Command

Own the fundamentals.

- Learn one MDM deeply: enrollment, profiles, policies.
- Make FileVault, patching & a compliance baseline second nature.

Code

Automate yourself.

- If you do it twice, script it. Start with shell/zsh.
- Turn your most-repeated task into a policy this month.

Community

Never go it alone.

- Ask in #macadminsindia — and answer when you can.
- Find a mentor through the Mac Admins India program.

MYTH-BUSTERS

MYTH

You must be a coder first. → Curiosity + fundamentals come first; code grows over time.

MYTH

Macs don't need security. → Patching, FileVault & compliance are core to the job.

MYTH

Asking for help looks junior. → Seniors ask daily — that's how the community works.

The golden rule: If you do it twice, script it. Stay curious, own the basics, automate the boring, and lean on your people.
